

## Object Localization

Image Classification

Classification w/ Localization

Detection

Define the target label  $y$

$$\Rightarrow y = \begin{bmatrix} p_c \\ b_x \\ b_y \\ b_h \\ b_w \\ c_1 \\ c_2 \\ c_3 \end{bmatrix} \quad \text{is there any object?}$$

e.g.  $\begin{bmatrix} 1 \\ 0.4 \\ 0.4 \\ 0.2 \\ 0.2 \\ 1 \\ 0 \\ 0 \end{bmatrix}, \begin{bmatrix} 0 \\ ? \\ ? \\ \vdots \\ ? \end{bmatrix}$

$$\Rightarrow L(\hat{y}, y) = \begin{cases} (\hat{y}_1 - y_1)^2 + (\hat{y}_2 - y_2)^2 + \dots + (\hat{y}_8 - y_8)^2 & \text{if } y_1 = 1 \\ L(\hat{y}_1 - y_1)^2 & \text{if } y_1 = 0 \end{cases}$$

## Landmark Detection

## Object Detection - Sliding Window

Computation Cost

## Bounding Box Prediction

### YOLO Algorithm

### Intersection over Union (IoU)

$$\text{IoU} = \frac{\text{Size of } \boxed{\text{red}}}{\text{Size of } \boxed{\text{green}}}$$

"Correct" if  $\text{IoU} \geq 0.5, 0.6$

## Non-Max Suppression

Multiple Detection on the same object

Pick the box w/ the largest  $P_c$   
Suppress others w/ high  $IoU \geq 0.5$

## Anchor Boxes

Overlapping objects:

$$y = \begin{bmatrix} P_c \\ b_x \\ b_y \\ b_h \\ b_w \\ C_1 \\ C_2 \\ C_3 \end{bmatrix}$$

$\Rightarrow$

Anchor Box 1

Anchor Box 2

$$y = \left\{ \begin{bmatrix} P_c \\ b_x \\ b_y \\ b_h \\ b_w \\ C_1 \\ C_2 \\ C_3 \end{bmatrix} \right\} \text{ Anchor Box 1}$$

$$y = \left\{ \begin{bmatrix} P_c \\ b_x \\ b_y \\ b_h \\ b_w \\ C_1 \\ C_2 \\ C_3 \end{bmatrix} \right\} \text{ Anchor Box 2}$$

## YOLO Algorithm

- 1 - cat
- 2 - dog
- 3 - bird

$y =$

$$\begin{bmatrix} 1 \\ b_x \\ b_y \\ 1 \\ 0 \\ 0 \\ 0 \\ ? \end{bmatrix}$$

$y$  is  $3 \times 3 \times (2 \times 8)$  ← 5 + # classes  
#anchors

in practice  $19 \times 19 \times (2 \times 8)$   
 $19 \times 19 \times (5 \times 8)$

$\rightarrow \dots \rightarrow$

$3 \times 3 \times 16$

## Region Proposal

R-CNN

Segmentation Algorithms  
~ 2,000 blocks

R-CNN: Propose regions. Classify proposed regions one at a time.

Output label + bounding box

Fast R-CNN: Propose regions. Use convolutional implementation of sliding windows to classify all the proposed regions.

Faster R-CNN: Use convolutional network to propose regions.
